APPLICATION FOR OPEN SPACE CONVERSION, § 10.1-1704

Atlantic Coast Pipeline, LLC

BAT-04096 (Bright)

VOF Open-Space Easement:	BAT-04096
Property Owner:	Lester D. Bright
Open-Space Easement Acreage:	339.777
County:	Bath

Applicant:	Atlantic Coast Pipeline, LLC
Acres to be permanently converted:	~ 2.30 acres (1.65 acres for pipeline right-of-way and 0.65 acre for permanent road easement)
Acres to be temporarily disturbed:	~ 4.96 acres
Total impacted acreage:	~ 7.26 acres
Acres of substitute land:	~ 1,034 acres (for the nine impacted easements in western Virginia)

Application Overview:

Atlantic Coast Pipeline, LLC (ACP) is seeking approval at the February 9, 2017 Board meeting for approximately 2.30 acres of land to be permanently converted from the above referenced open-space easement, pursuant to § 10.1-1704, for the construction, operation and maintenance of a 42-inch diameter underground natural gas pipeline. The pipeline would cross approximately 0.38 mile of the open-space easement and require a 125-foot construction easement with 50 feet being maintained in permanent easement. A permanent road would cross the property for approximately 0.21 mile. ACP’s application for the conversion of a portion of this open space is included as Exhibit A.

Background:

The Virginia Outdoors Foundation (VOF) became aware of the Atlantic Coast Pipeline (ACP) project in mid-2014. Due to the scope and scale of the proposed pipeline project VOF determined that any permanent encroachments associated with the project would be inconsistent with the terms of the open-space easements and result in the conversion or diversion of open space land, pursuant to Virginia Code § 10.1-1704 of the Open-Space Land Act.

As plans for the ACP developed and further information became available, VOF recognized the need to correspond with the Federal Energy Regulatory Commission (FERC). In 2015 VOF wrote FERC regarding alternative routes and concerns related to potential intersections with VOF open-space easements. VOF also communicated directly with ACP representatives associated with the development of the ACP, in hopes that direct dialog would help protect the interests held by VOF for the Commonwealth. This collaborative relationship with FERC and ACP appeared to be successful, since by the end of 2015 only one VOF open-space easement appeared to be intersected by the proposed ACP.

Then, in a letter from ACP, dated February 16, 2016 a revised route segment known as GWNF-6 was announced, see Exhibit B. In Virginia this route segment was identified to address concerns from the U.S. Forest Service related to Cow Knob Salamander habitat within the George Washington National Forest (GWNF). Although the GWNF-6 route avoids significant portions of the National Forest, the revised route continues to intersect portions of the National Forest in Highland, Bath and Augusta Counties.

APPLICATION FOR OPEN SPACE CONVERSION, § 10.1-1704

Atlantic Coast Pipeline, LLC

BAT-04096 (Bright)

VOF met with ACP representatives on February 19, 2016 to discuss the numerous VOF open-space easements intersected by the new GWNF-6 route. ACP explained avoidance of the open-space easements was challenging due to comments received from the U.S. Forest Service. VOF met with ACP again on April 11, 2016 to discuss avoidance of the easements as well as substitute land and the different types of compensatory mitigation property VOF has received in relation to prior applications for the conversion of open space. In the end, it was determined and agreed upon that ACP would file a conversion/diversion (“1704”) application for each of the 10 open-space easement properties they proposed to cross. VOF originally received those applications from ACP in May, 2016 and revised applications in January, 2017.

On August 29, 2016, VOF was notified by FERC that it was requiring ACP to conduct further analysis on an alternative segment of the pipeline route through a portion of the Rockfish Valley in Nelson County known as the Spruce Creek Route Variation. On September 9, 2016, VOF issued a letter to FERC stating that if the new route was being evaluated, then it would require an additional “1704” application for an 11th easement property. The VOF letter urged FERC to reject the Spruce Creek route as a viable option and not include it in the Draft EIS. In addition, the VOF letter asked for the reconsideration of the primary route that will cross the 10 other VOF open-space easements. Finally, on December 5, 2016, VOF issued another letter to FERC in response to ACP statements made on November 9, 2016 reiterating that the ACP would constitute a violation of VOF open-space easements and that 1704 application approval would be required for each impacted property.

List of correspondences and meetings (Letters found in Exhibit B):

Date	Correspondence or Meeting
06-25-2014	VOF letter to Dominion Transmission, Inc.
03-20-2015	VOF letter to FERC
08-11-2015	VOF meeting with ACP
08-13-2015	VOF letter to FERC
08-24-2015	VOF letter to Dominion Resources Services, Inc.
11-05-2015	VOF Energy and Infrastructure Committee Meeting: Presentation by ACP
12-15-2015	VOF meeting with ACP
02-16-2016	Dominion Transmission, Inc. letter to FERC (route GWNF-6 announced)
02-19-2016	VOF meeting with ACP

10-26-2016	VOF staff site visit to Hayfields Farm
12-05-2016	VOF letter to FERC

VOF Easement Information:

Property Features: (from the Baseline Documentation Report, Exhibit C)

The Bright VOF easement is located in Bath County and is a mix of open fields used to raise cattle and to grow hay, and upland hardwood forests that are selectively timbered. The property shares three borders with the George Washington National Forest (GWNF) and is located at the end of a VDOT road in a valley called “Bright’s Hollow.” This family has owned this property for at least 100 years, there is a small house on the farm and several barns. A public hiking trail within the GWNF runs parallel to the property’s southern boundary. The creek on the property is called Back Draft and it is a tributary of Mill Creek.

Conservation Values: (from the Open-Space Deed of Easement, Exhibit D)

R-12 The Property is a working hay and cattle farm, which, according to the United States Department of Agriculture Natural Resource Conservation Service, contains 75 acres of Soils of Statewide Importance and 16 acres of Prime Soils. Prime farmland is of major importance in meeting the nation’s short and long range needs for food and fiber; the U.S. Department of Agriculture encourages the wise use of our nation’s prime farmland. Protection of the Property by the restrictions set forth herein help to keep the Property available for agricultural production in perpetuity.

R-13 The Property has been in Grantor’s family since 1916, and in August 2016, will be eligible for recognition as a “Virginia Century Farm” under a Virginia Department of Agriculture and Consumer Services program that “recognizes and honors those farms that have been in operation for at least 100 consecutive years and the generations of Virginia farm families whose diligent and dedicated efforts have maintained these farms, provided nourishment to their fellow citizens and contributed so greatly to the economy of the Commonwealth”. The restrictions set forth herein help ensure that the Property is available for agricultural production in the future.

R-14 The Property is in close proximity to several other properties located in Bath County containing in the aggregate 2,000 acres under open-space easements held by Grantee, and the protection of the Property herein will help preserve a public viewshed of rural landscapes in the area.

R-15 For a distance of approximately two miles, the Property joins the boundary of the George Washington National Forest (GWNF), which is owned and managed by the United States Department of Agriculture (USDA) for resource conservation... The preservation of this Property by the restrictions set forth herein will contribute to that goal of the USDA, and, combined with other protected private conservation lands nearby, help provide a wildlife habitat and open-space buffer for the GWNF.

R-17 The Brushy Ridge Trail (also called the Back Draft Trail) parallels the southwest boundary of the Property in the National Forest, coming within 100 feet of the boundary in certain locations. Restrictions on development and buildings in this deed help protect the view from this public recreational trail.

R-18 The Property contains over 214 acres designated by the Virginia Department of Forestry as having a high ranking in “Forest Conservation Value”, and protection of the Property in perpetuity hereunder helps ensure that the forested areas remain available for wood products, watershed protection, and wildlife habitat.

R-19 Approximately 209 acres of the Property has “Very High Ecological Integrity” based on data from the Virginia Natural Landscape Assessment conducted by the Virginia Department of Conservation and Recreation (DCR), and limiting intensive development of the Property with this Easement helps protect its ecological integrity.

R-20 The Property contains over 4,000 feet of Back Draft Creek that flows through the Property. It is a tributary of Mill Creek and within the Calfpasture River/Maury River watershed, which flows to the James River. Preventing excessive surface disturbance along the banks and restricting the impervious surface allowed on the Property helps protect water quality in this stream and watershed.

Staff Investigation and Analysis:

Site Visit:

Staff walked the proposed route of the ACP on May 19, 2016, which had been surveyed and flagged by ACP representatives. Staff followed the flagging and collected GPS points at incremental segments along the route, which is in very close proximity to the George Washington National Forest boundary. Maps and photographs pertaining to field investigations by staff are available in Exhibit E.

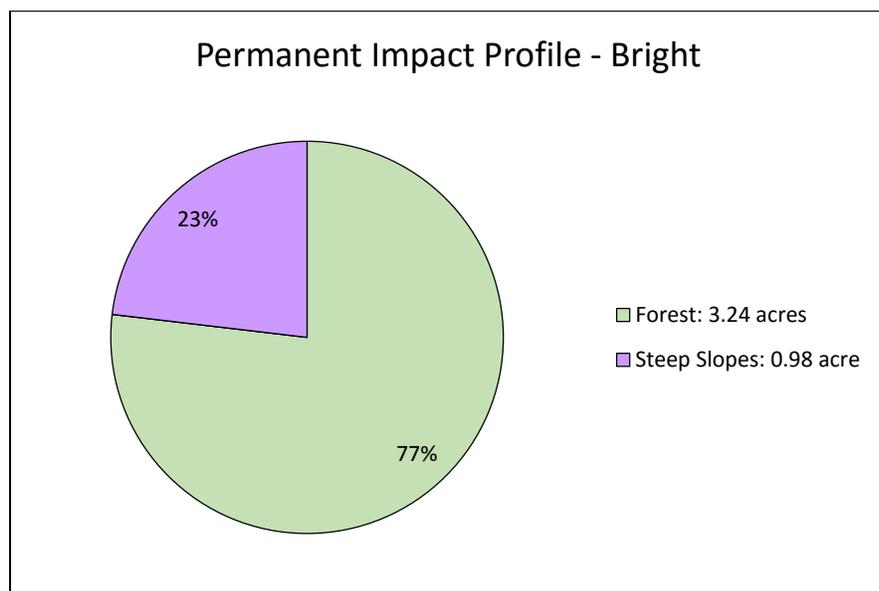

Route Description:

The ACP enters this property from the south through the George Washington National Forest and continues in northeast direction along the top of Brushy Ridge. The pipeline follows the northwestern boundary of the property before returning into the George Washington National Forest.

Permanent Impact Profile: (supplemental to information on page 3)

The table available in Exhibit E2 contains detailed information regarding potential impacts to the conservation values and features shared by each open-space easement intersected by the ACP. A snapshot of this information for the Bright easement is included below:

Pipeline length	Road length	Total length
0.38 mile	0.21 mile	0.59 mile

Note: The analysis method associated with the impact profile may yield acreage sums which differ from the value listed on page three and in Exhibit A. This is due to situations where forest, important soils and steep slopes overlap, or do not intersect with the ACP project. These values do not change the acreages requested by the applicant to be permanently converted.

Response to the Code of Virginia, § 10.1-1704 of the Open-Space Land Act:

(§ 10.1-1704 code provided in Exhibit F and portions in outline format below)

VOF required the applicants to comply with section 10.1-1704 of the Code of Virginia for the proposed natural gas pipeline projects and their impacts to VOF easements.

A. No open-space land, the title to or interest or right in which has been acquired under this chapter and which has been designated as open-space land under the authority of this chapter, shall be converted or diverted from open-space land use unless

(i) the conversion or diversion is determined by the public body to be

(a) essential to the orderly development and growth of the locality and

VOF 1704 procedures¹ states that the project applicant must prove essentiality. Essentiality is defined as “*essential to the orderly development and growth of the locality.*” Therefore, the applicant must demonstrate that the 1704 request is essential to the orderly development and growth of the locality. The applicant must submit a letter or statement and/or materials from the local government, regional, state or federal entity to this effect.

The applicant must also provide examples of all alternatives considered, including project alterations or other options that were considered to avoid the need to convert or divert open-space land and why those alternatives were not realistic. Clear evidence should be provided that there are no other feasible alternatives and that the 1704 process is not just the most cost-effective solution. This evidence might include letters from professionals consulted, certified engineering studies and/or plans, local planning documents, and environmental analyses. VOF requires that the applicant submit a letter or statement from the regulatory authority that determines essentiality.

Response: In its applications, ACP addresses this issue in detail and presents its arguments for why the project is “essential” and why they believe that there are no feasible alternatives to crossing the VOF easement. See Exhibit A, section 2.0 and section 3.0.

¹ Virginia Outdoors Foundation, Diversion or Conversion of Open-Space Land (“1704”) External Procedures

(b) in accordance with the official comprehensive plan for the locality in effect at the time of conversion or diversion and

VOF procedures¹ require compliance with Local Comprehensive Plan, defined as “*in accordance with the official comprehensive plan for the locality in effect at the time of conversion or diversion.*” The applicant must demonstrate that the proposed project is in accordance with the current comprehensive plan of the local government. Copies of the applicable section of the current plan are required as well as statements from the local planning staff, Planning Commission or Board of Supervisors. Specific references to goals, objectives, or strategies as well as the future land use map are strongly recommended.

Response: ACP presents its case that the proposed project is in accordance with the current comprehensive plan for Bath County in Exhibit A, section 4.0. As part of VOF’s due diligence, on April 19 and December 21, 2016 we asked the County if they had any “response to the question of whether or not the project is in accordance with the official comprehensive plan for the locality in effect at the time of conversion or diversion as stated below in the section from 10.1-1704 of the Code of Virginia.” While the county comprehensive plan does not specifically address the siting or location of interstate transmission lines or corridors they responded with a statement in opposition to the ACP available in Exhibit G.

(ii) there is substituted other real property which is

(a) of at least equal fair market value,

VOF procedures¹ require that there is substituted other real property which is of at least equal fair market value. The applicant must propose substitute conservation land and demonstrate that the property is of at least equal fair market value. Equivalent fair market value must be established by a Virginia Certified General Real Estate Appraiser, with experience in conservation easement appraisals, agreeable to both VOF and the applicant, or the appraisal may be contracted by VOF, but in either case, the appraisal must be paid for by the applicant. Appraisers who also have experience appraising land located in the same locality where the 1704 is proposed are recommended. The appraisal must include valuation of both the eased property proposed for diversion and the proposed substitute land. The easement property must be appraised using the “before” and “after” technique (i.e., what would the current land value be if it was unencumbered vs. what is the land currently worth with the existing easement). The replacement land must be valued using the same method (i.e., what is the replacement land currently worth vs. what will it be worth as protected under the Open Space Land Act). The appraiser needs to determine value of easement to be diverted and value of property protected and serving as replacement land.

Response: ACP has provided certified appraisals from an experienced conservation easement appraiser agreeable to both VOF and ACP demonstrating that the fair market value of the 1,034-acre Hayfields Farm will exceed the fair market value of the land impacted by the ACP on this easement, as well as the eight (8) other affected VOF open-space easements in western Virginia. See Exhibit A, section 5.0.

(b) of greater value as permanent open-space land than the land converted or diverted and

VOF procedures¹ require that the replacement land-conservation value be “*of greater value as permanent open-space land than the land converted or diverted.*”

The applicant should provide maps and photos of the property to be substituted for the open space land and a description of the conservation values to be protected. In the materials submitted, the applicant must make a case for the substituted land being of “greater value as open space” than the land proposed to be diverted from open space.

Response: ACP provides a description and map and photos of the property to be substituted for the open space land and compares the conservation values of the Bright property being impacted to the conservation values of the proposed substitute land within Exhibit A, section 6.0. In addition, VOF staff conducted their own analysis of the conservation values of the substitute property in consultation with other state natural resource protection agencies and using its own resources. See Exhibit H, Substitute Land Report – Hayfields Farm.

(c) *of as nearly as feasible equivalent usefulness and location for use as permanent open-space land as is the land converted or diverted.*

VOF procedures¹ provide requirements for the location and usefulness of the substitute land. It must be “*of as nearly as feasible equivalent usefulness and location for use as permanent open-space land as is the land converted or diverted.*” The applicant should provide information on the proximity of the proposed substitute land to the existing protected open space land through maps, plats, and descriptions. If the proposed substitute land is not adjacent to the existing protected open-space land, then the applicant should provide a clear explanation for why this was not possible and how the proposed property will provide clear replacement conservation values. The applicant must also make a case for the proposed substitute land being of “equivalent usefulness” to the land proposed to be diverted from open space.

Response: As referenced in Exhibit A, section 7.0, Hayfields Farm is located approximately 7.9 miles northwest of the Bright open-space easement. Because the substitute land is not adjacent to the Bright property, ACP explains in its application why the land is of equivalent usefulness and location as permanent open-space land.

VOF staff also addresses equivalent usefulness in Exhibit H, Substitute Land Report – Hayfields Farm. The Hayfields Farm property has the potential to serve multiple conservation goals and opportunities for the Commonwealth of Virginia. The property has important habitat and wildlife benefits as well as the potential to serve public access or recreational needs in the region. The property includes multiple resource values including scenic, upland forest, wildlife habitat, water quality, potential karst and agricultural resources.

Contextual Information:

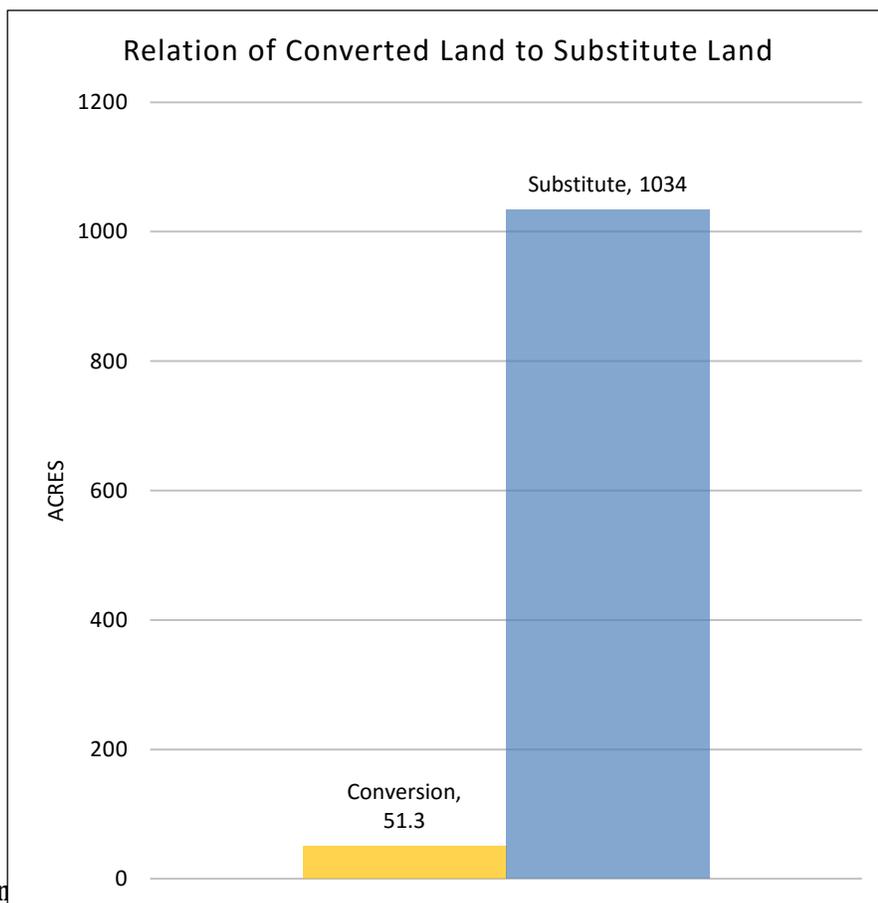

APPLICATION FOR OPEN SPACE CONVERSION, § 10.1-1704

Atlantic Coast Pipeline, LLC

BAT-04096 (Bright)

The table below represents the proportion of substitute acres contributed by each VOF easement in relation to the 1,034-acre Hayfields Farm property. The ratio of substitute land to converted land is approximately 20:1. Note: The Saunders & Saunders open-space easement and the Rockfish River property are not included in the ratio calculation, table or graph.

Easement Donor	Permanent encroachment area in acres	Percent of Hayfields Farm associated with each easement	Acres of Hayfields Farm associated with each easement	Substitute Ratio
Teague	6.07	11.83%	122.35	20.16
Normandy	13.01	25.36%	262.23	20.16
Rice	6.48	12.63%	130.61	20.16
Chandler	0.80	1.56%	16.12	20.16
Revercomb	8.72	17.00%	175.76	20.16
Koontz	4.13	8.05%	83.24	20.16
Wilderness	8.27	16.12%	166.69	20.16
Bright	2.30	4.48%	46.36	20.16
Berry	1.52	2.96%	30.64	20.16
Total	51.30	100.00%	1,034	-

Conclusion

APPLICATION FOR OPEN SPACE CONVERSION, § 10.1-1704

Atlantic Coast Pipeline, LLC

BAT-04096 (Bright)

If the Board of Trustees finds that ACP applications meet the requirements of Section 10.1-1704, staff would recommend the following conditions:

- Issuance of a Certificate of Public Convenience and Necessity (Certificate) by FERC and all other necessary state and federal permits for the proposed ACP route crossing this easement.
- VOF approval and sign off of final ROW easement permitting only a permanent 50-foot easement for one 42-inch diameter underground natural gas pipeline and the associated permanent access road easement. No above-ground structures are permitted within this permanent ROW with the exception of above ground pipeline markers as required by law.
- ACP transfer of fee-simple interest to VOF of the proposed 1,034-acre Hayfields Farm Property as Substitute Land for the converted areas of the open-space easement property.
- The acceptance of funds from ACP to: (i) serve as a Stewardship Fund to support VOF with the operation and management of the substitute properties, and (ii) partially offset VOF's unreimbursed costs associated with the ACP.
- Written requests from both VOF and ACP to FERC to include the above stated requirements as conditions of the FERC approval.

Additional site specific conditions may be developed with ACP representatives and the current landowner of the easement property such as minimizing the extent of the permanent easement and construction footprint where feasible, developing pollinator corridors and restoring other natural habitat areas in order to help preserve the purpose of the open-space deed of easement.
